

Support Developer M/F

#Mobapi

At **Mobapi**, our goal is to create innovations that will change the way organizations connect their data!

Mobapi is a solution created by Bitwip, a high-growth start-up located in the heart of Cayenne in French Guiana, and we receive our financial backing from BPI France and an investment fund led by CNES, the French National Space Agency, the Region of French Guiana and the European Union.

To cut a long story short, Mobapi was created two years ago to deal with the continuous and growing increase in the number of apps and the Internet of Things – and the urgent need to deal with the abundance of data that this creates. It's an innovative cloud solution that allows data sources to be connected, and the data provided to be transformed and made available via an API – and it's all done without coding as an API Builder is used instead.

An initial version was presented at the Mobile World Congress Trade Fair in March 2015 in Barcelona and we plan to make the solution available to the first users by the first quarter of 2016.

You love a challenge, and you want to work in a pleasant, dynamic environment. You're passionate about software development; you'd like to bring your personal flair for interior design to our open space; you want to join a young, tight-knit team that combines fun with professional excellence - and why not discover the Amazon region while you're at it?

If you recognize yourself in this description, join the #MobapiTeam!

#Your role

As an experienced Cloud developer, you'll be part of the technical team, with an ultimate goal of taking part in the development of the innovative Mobapi solution to be launched in early 2016.

Your job description will consist of:

- Managing customer technical support and helping our clients
- Implementing automated testing
- Programming and designing features for our cloud product
- Writing documentation
- Taking part in the decision making process
- Programming with coffeescript and JavaScript languages on a Node.js platform

Bonus: you may be required to travel within French Guiana and internationally as part of your missions or attending events.

#Must have

- You have a sound understanding of the API and REST ecosystem as well as Node.js, coffeescript, JavaScript and AngularJS
- You are familiar with Test Driven Development methodology
- You are flexible and able to adapt to a variety of situations
- You are well organized and methodical
- You work well in a team and you understand why communication is important
- You have a good standard of English; fluency is a plus
- You are highly motivated and capable of working independently

#Your extra talent

- You have good people skills and you are able to lead several chat sessions concurrently
- You already have a professional experience in programming
- You've completed a GitHub project that you could share with us
- You don't fear to sleep in a hammock in the forest during our team building away days

#Conditions

- **Contract type:** 12-month fixed term (possibility of converting to a permanent contract with an indefinite term)
- **Remuneration:** to be defined in response to your career profile
- **Benefits:** complementary health insurance, lunch vouchers, team building exercises, a brand new Mac as your personal machine, high quality coffee, the CEO's door is always open, an Open Device Lab at your disposal
- **Start date:** as soon as possible
- **Location:** Cayenne (French Guiana – South America)

We greatly value diversity in the team and we follow a strict policy of non-discrimination when recruiting.
